

DOVE.

*Speculum anni à partu virginis*  
MDCXLVII.

OR

An Almanack for the  
yeare of our Lord God

1647

Being the third after Bissextile  
or Leap-yeare, and from the  
Worlds creation,

5657.

Calculated properly for the famous Uni-  
versitie and Town of Cambridge,  
where the pole is elevated  
52 degre 47. min.

But may indifferently serve for any other  
place within this Kingdome.

*Candida quæ nitido volucribus sidera cernit,  
Fertur: mira cœlestis artem, arte Dea;  
Indidit & vires, quæ corpora tantis illa  
Assuevit: vides inferera molis.*

Printed at London for the Com-  
pany of Stationers.

The golden number 145 Ann. Dom.  
 The cycle of the sun 4  
 The Epact 24 1647.

The allowance for light gold.

Shillings.			
In every piece of	33	the remedy must not exceed	4 grains and an half.
	30		4 grains and an half.
	25		3 grains.
	20		3 grains.
	16 & 6 pence		2 grains and an half.
	11		2 grains.
	10		2 grains.
	5 & 6 pence		1 grain.
	5		1 grain.
	4 4 pen. 3 farth.		1 grain.
	2 & 9 pence		half a grain.
	2 & 6 pence		half a grain.

Of the currancy of Gold.

And note, that any piece of old gold, (as 22 or 11 shillings piece) is payable for two pence a grain, when it exceedeth the remedy, if it want not above the double remedy. But for new gold, as 20. and 10) they must never exceed their remedy: for if they doe, they are not to bee offered in payment. Neither are the 22, 11, and such like, to bee taken, if they exceed the double of their remedy. By observing this difference, the former table will be well understood.

A note of that time forbidding marriage.

When Advent-sunday cometh, marriage is forbidden untill Hillary, or the 13 of January. Then at Septuagesima it goeth out again untill Low Sunday. Afterwards at Rogation it is also forbidden: but at Trinity Sunday it cometh in again, and so continueth untill Advent.

The

Dove 1647.

The Anatomy of mans body, as the parts thereof are by Astrologers attributed unto the 12 Signes of the Zodiac.

♈ Aries head and face.

♎ Neck and throat

♊ Breast, stomach and ribs.

♋ Bowels and belly.

♏ Pikes the Feet.

The Characters of the Planets, and thier Aspects.

♄ ♀ ♂ ☉ ♀ ☿ ☿  
Saturn, Iupiter. Mars, Sol. Venus. Mercury. Luna.

Conjunction, Opposition. Trine, Quazile. Sextile.

♏ The Dragons head. ♄ The Dragons ♄ tail.

A 2

Astrolo.

*Astronomical notes for the year of our Lord God, 1647.*

**T**he true or apparent length of the tropicall year, is 365. dayes, 5 hours, 55 minutes, 28 seconds, and 26 thirds.

The greatest Obliquity of the Zodiack is 23 degrees, 28 minutes, and 5 thirds. The precession of the Equinoctiall is 28 degrees, 31 minutes, 8 seconds, 35 thirds and 17 fourths.

♄ Saturn is direct from the second of *January*, till the second of *September*; after that retrograde all the yeere after.

♃ Jupiter ceaseth to bee retrograde on the 15 day of *March*, and cometh not into the like motion again untill the 14 of *December*.

♂ Mars beginneth to be direct on the 25 day of *February*, and is so all the yeere after.

♀ Venus begins not to be retrograde till the third of *Novem.*

☿ Mercurie is retrograde from the 3 of *January*, till the 4 of *February*; Retrograde again from the last of *April*, till the 21 of *May*. And retrograde from the 23 of *August*, till the 15 of *September*. Retrograde also from the 17 of *December* beyond the yeere end. But at all other times direct.

Note also that ☿ will be in a quadrate with ☉ on the 21 of *January*, and in the like aspect with ♀ about 3 dayes after. On the 15 of *February* he is in a quadrate with ♄. in conjunction with him on the 11 of *April*, and with ♀ on the 13 of the same. He hath the like meeting with ☉ on the 2 *May*.

But (omitting many) I cannot but take notice of the great configuration of the Planets in *January* this yeare 1647. As first an opposition almo<sup>t</sup> of ♂ and ♀ on the 5 day. An opposition of ☉ and ♃ on the 13. An opposition of ☉ and ♂ on the 14. An opposition of ♃ and ♀ on the 17. Of ♂ and ♀ on the 18, and a conjunction of Jupiter and Mars (in Leo) on the 22 day, between 5 and 6 at night: in which conjunction ♂ is much elevated above ♃. There is also another conjunction of Jupiter and Mars on the 21 day of *March* in the 28 degree of Cancer; in which ♂ also is predominant: in the latter end of which moneth are quadrates of ♃ and ♀. ♂ and ♀. ♃ and ♀. ♂ and ♀. The 18 of *April* ☐ ☉ ♂. The 22 of *May* ☐ ♄ ♀. And on the 28 of *October* a quadrate of ♃ and ♂. A

A Table shewing the length of the day, which  
may be also found without this Table, by doubling  
the hour and minute of Sun-setting.

# The houre and min. of

Full the  
Lord.  
bridge.

Sun  
setting

I find this moneth so full of great, and strange con-  
figurations of the planets, as that I cannot but think  
it will prove farre differing from the Ianuaries of  
former years, and may perhaps afford some thun-  
der and lightning, and better weather then is usuall.  
It seemeth also to portend strange and extraordinary  
things in some places, by reason of the great domi-  
nion which is in Mars, whilst hee and Iupiter are in  
conjunction.

Saturn is with the moon the first day about 7 at night. Iu-  
piter, Mars, and the moon, are very near together on the sixth  
and seventh dayes. Mercury will be with her on the 21 day,  
and Venus on the day after, being the very day that the moon  
changelth; and therefore hid under the Sunnes beams, and can-  
not bee seen.

On the tenth day of this month, at 49 min. past two in the afternoon, the sunne enters into Aries: three houres after which the moon cometh to the full, and is in a sextile to Iupiter & Mars, & in an opposition to Mercurie. The 17 degree of Leo is found in the horoscope, & in the mid-heaven the 15 degree of Taurus. About the 19 & 21 dayes expect hot weather with thunder and lightning, by reason of the conjunction of U & S and so much the rather, because Mars is lord of this quarter.

Venus & Mercurie are in conjunction the third day in Taurus, the house of Venus; at which time Mars is with the Moone in Leo, being lately come away from Iupiter, whom shee left in the 28 degree of Cancer, her own house; she is also on the same day in a quadrate to Venus and Mercurie: all which (in my judgement) is like to produce, not onely wind and storms; but some thund. also on the 3 day of this moneth in the morning.

The Sunne and Saturne darken the air on the 2 day, and on the 9 day the Sunne and Mercurie raise great winds. Iupiter is with the Moone the 17 day, and Mars on the first day. Mars likewise is with her on the 29 day. Saturne and Mercury are both with her on the 22, at which time is an hatefull square of Saturne and Mars, about 8 a clock at night: a signe of warre and thunder.

Saturn is with the Moon the 79 day, at which time Jupiter and Venus are in conjunction in the ninth degree of Leo. Mercury is with Luna the 21 day, but too near the Sun to be seen. Jupiter and Venus are with her the 24 day in the West, and are not without dignities, but Jupiter is chief Dominator in the Summer-quarters. Luna is his partner, and so in some sort is Venus.

The 5 day is a conjunction of Sol and Mercury early in the morn. and on the 17 day a conjunction of Iupiter and Mercury, betokening much wind then. On the 16 day Saturnis with the Moon, & on the 12 day Iupiter & mercury; but these last are to o near the Sun to be seen. Venus is with her the 24, and Mars the 15, about which time the weather may be turbulent and stormy, as is already nored in its proper place.

The second day there is a conjunction of the Sun and Jupiter in the 19 degree of Leo, which may produce thunder, or sultry hot weather, the 14 day Mars and Venus are in conjunction likewise about the 14 degree of Libra, portending stormes. On the 21 Mercury is with the Moon, and on the 22 and 23 Mars and Venus: they are with her in the 19 degree of Libra, causing wet and windy weather.

On the 6 day the Sun and Mercury are in conjunction. On the 9 day Saturn will be with the Moon. The 10 day the and Mars are together, and on the day following Venus is with her. The Sun enters Libra on the 13 day, at 25 min. past 9 in the forenoon, the 5 degree and 42 min. of Scorpio then ascending. Mars is found to be the Lord of this quarter; yet so as Mercury and Jupiter share with him.

The 4 and 5 days Saturn is with the Moon. Jupiter is with her on the 13 day: Mars is with her the 19 day, and Venus on the day after at 10 a clock at night in the West. Mercury is with her on the same day that she changeth, at which time the weather is like to be windy, and inconstant. The 28 a quadrate of ♄ and ♃, the ☉ and ♀ being then in conjunction.

The 3 day Saturn and the Moon will be together. On the 10 day look and you may see Jupiter with her. Venus, Mercury, Mars, the Sun and the Moon are very neare together on the 16 and 17 dayes, a sign of much wind and wet about that time; and on the 20 day turbulent, wet and windy. The last day Saturn will be with the Moon again.

## An exact and perfect computation of the Seven Ages of the World.

From the	Creation to the Flood	— 1656 —	The first Age.
	Flood to the Promise	— 427 —	The second Age.
	Promise to the Law	— 410 —	The third Age.
	Law to the Temple	— 480 —	The fourth Age.
	Temple to the Captivity	— 411 —	The fifth Age.
	Captivity to Christ	— 606 —	The sixth Age.

The seventh Age beginneth at the Birth of Christ, and hath continued (according to the Unigenit Decembris) 1646. years fully and compleat, for now we write 1647.

And note, that whereas I mention 606 years from the Captivity to Christ, it is meant of so many years from the beginning of the Captivity in the fourth year of Jehoiakim, to the first year of the common Era of Christs Nativity exclusively.

Note also, that by this computation it appeareth, that from the Creation of the World to this present, are 1617. years current, there being 1616. years compleat. and finished at (or about) the time of our Vernal Equinox: And why I say, at or about, is because there were three dayes of the Creation past, before the Sun and Moon were made.

Omnia enim vireant nunc est nova temporis ætas,

Sic annus per ver: accipiendus erit.

C

Memorable

Dove 1647.

*Memorable Accidents;*

OR,

A Chronologicall description of many things  
worthy of memory, shewing how long they hap-  
ned before this year of our Lord 1647.

Since the Creation of the World	5657
Since Noahs Flood	4001
Since the promise made to Abraham	3579
Since the Children of Israel came out of Egypt	3144
Since Salomon began to build the Temple	2664
Since Nebuchadnezzar burnt the Temple	2234
Since the destruction of Jerusalem by Titus	1577
Since the writing of the Revelation by St. John	1552
Since the first Generall Council	1323
Since Cambridge was made an University	1013
Since England was conquered by Duke William	181
Since the first Mayor of London	457
Since the invention of Printing	267
Since the institution of Parliament	207
Since Churches were first used in England	92
Since the first Martyr in Cassiopea	75
Since the whole Heavens seemed to burne	73
Since Tilbarie Camp on St. James his day	39
Since the Voyage to Cadiz	51
Since the Gun-powder Treason	42
Since the great frost towards the end of this year	40
Since the last Playing Stage	29
Since Prince Charles was borne	17
Since Tho. Par dyed, being 150 years old	12

Since that on the 27 day of March we are to begin  
the 22 yeare of our King. so; then he hath reigned  
22 yeares compleat. Vivat Rex.

of

Of the foure Seasons or Quarters  
of the Yeare.

**A** Quinodtium Vernalle, or the Vernal Equinox, is alwayes at the Sunnes entrance into Aries, which gives beginning to the Spring, and from whence the Reuelutions of the World are Astrologically reckoned, because at that time of the yeare the World was Created. The time of this Equinox was then about the 21 day of April, and fourth day of the weeke, the Moone being then at the full, the Cycle of the Sunne was 4, the Dominicall Letter C, and the Golden Number, One. Thus it was then: but now the Equinox is sooner, and will be this year on the 10 day of March, 49 minutes past 2 a clock in the afternoon; at which time the 27 degree of Leo is in the Meridiane, and the 15 of Taurus in the midst of Heaven. The reason of which difference is, in regard of the anticipation of the Equinoctiall, which in one yeare amounts to 10 minutes and 48 seconds, encreasing to the quantitie of a day in the space of about 134 yeares.

Solstitium Aestivum, or the Summer Solstice, begins alwayes with the Sunnes entrance  
C 2 into

Dove. 1647.

into Cancer, which will be this yeare on the 11. day of June, at 40. minutes past 6 in the after noon, the 10 degree and 7 minuts of Sagittarius then ascending. In the former Quarter Mars and Sol were chiefe Dominators; but now in this, Jupiter and Luna rule.

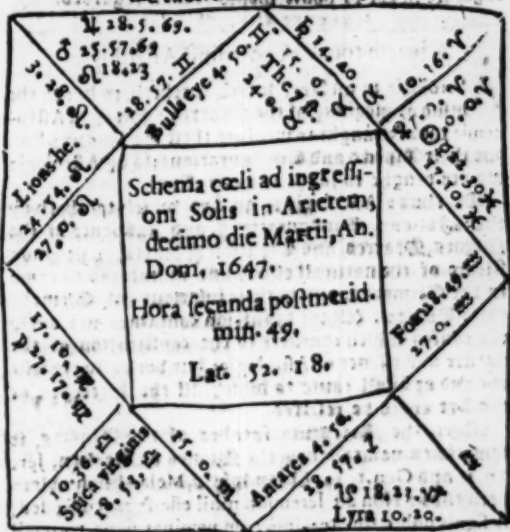

The Autumnall Equinox, that followes next, and is when the Sunn doth enter the first scruple of Libra, which will be this yeare on the 13 of September, 25. minutes past 9 in the morning the 5. degree and 42. minutes of Scorpio then ascending. Mars is Lord of this Quarter; yet so, as Mercury, Jupiter and Saturne are in a manner of equall power with him.

Solstitium Hyemale, or that part which wee call the Winter Quarter, begins with the Sunns entrance into Cancer, which will be this yeare on the 11 day of December, 29 minutes past 8. at night the 23 degree of Leo being then in the Meridiane. Mercury is Lord of this Quarter; and likewise, Mercury, the Moon and Jupiter are chiefe Dominators for the whole yeare. And as for the Signs of the Heavens at the Sunns entrance into Aries, the next page will shew it.

DOVE, 1647.

A figure of the Heavens at the time when the Sun enters into the first sign, of Aries, the first sign of the twelve in the Zodiac.

In this figure the Ascendant is 17. 0. of Leo: The Sunne is therefore Lord thereof. Saturne is almost exactly in the Cuspis of the tenth house. Jupiter and Mars are in conjunction in the 11 house, in Cancer the house of the Moone. The Sunne and Venus are in the 8 house, in Aries the house of Mars, not above 7 degrees asunder. Mercurie is also in the 8 house, in Pisces the house of Jupiter, opposing himselfe against the Moone, who is in the second house in Virgo, the house of Mercurie. The Sunne also happens to meet the Moone in opposition, but is not far from a trine.

Trine with Jupiter The Moone, Jupiter & Mars are in a Sextile; especially Jupiter & the, at the very time of this Revolution. But that Jupiter & Mars should be so near together in the 11. house, should be well regarded.

A briefe touch concerning Astrologie.

**A**strologie is an Art, which teacheth to know the ~~use~~ <sup>use</sup> or meaning of the Starres: For as in Astro-  
nomic we are taught to measure their motions, and find  
out their Aspects and Configurations; so by Astrologie  
we are taught to judge of their effects.

Or thus: Astrologie is an Art, which teacheth by  
the Motions, Configurations, and Influence of the  
Signes, Starres, and Celestiall Planets, to prognos-  
ticate of the naturall effects and mutations to come  
in the Elements, and in these inferiour and elemen-  
tarie Bodies: Which definition contains not onely  
the causes which concurre to the constitution of the  
nature and essence of Astrologie: but doth also expresse  
the end or final cause to which all the Precepts of  
the Art are to be referred.

When the Scripture speaks of the Starres, it  
sometimes nameth them the Signes of Heaven, Jer.  
10. 4. and Gen. 1. 14. Upon which, Melancthon obser-  
veth thus: Non ait Jeremias, nihil esse signa coeli; sed,  
A signa nolite timere; Imò cum nominat signa, portendi  
aliquid affirmat. In Luther also, upon the words of  
Moses in Gen. 1. Simpliciter Lunam cum Sole & Stellis  
in firmamento Coeli Moses dicit positas, ut essent signa  
futurorum eventuum, seu experientia de Eclipsibus,  
magnis Conjunctionibus, & aliis quibusdam Meteoris do-  
cet. Sometimes it calleth them the Host and Armies  
of Heaven; signifying thereby the Divine Power  
of God in these admired Instruments: by which he  
governeth the frame of this corruptible World: as  
may be seen in Gen. 1. 1. 2 King. 22. 1. and in Iudg. 5. 20.  
In which last Text is especially testified, that the

Starres

starres fought from Heaven, the starres in their courses fought against Sifera. Beside, had the heavens & starres no force at all, the Scriptures would make distinction between the sweet influences of the Pleiades, and the blinding vertues of Orion; but the Scripture makes such a distinction, in Job 38. 31. See also Deut. 33. 14. and Hos. 1. 11. In which last Text the words be these; And it shall come to passe in that day, I will heare, saith the Lord, I will heare the Heavens, and they shall heare the Earth. By which is gathered, that what (in certaine other places) is said of some of the starres, is true of all the rest.

And for the searching into these things, whereby to be instructed concerning the event of such things as are thereunto belonging, the Scripture againe hath said, that the worker of the Lord are great, and fought out of those who have pleasure therein; Psal. 135. 2. And therefore, that the children of Isachar are spoken of as men of eminence, in regard that they had understanding of the times, to know what Israel ought to doe, 1 Chron. 12. 32. Moses and Daniel are commended likewise for their education and skill; the one, in the learning of the Egyptians; the other in the learning of the Chaldeans; as we read in Act. 7. 10. and in Dan. 1. 17. And from whence was it that those Nations had their skill; but from Noah and Abraham, if Josephus or Berosus may be credited.

I doubt not therefore, but that the Signes of Heaven may lawfully enough be looked into, & judgement be given of future events: In the knowledge of which yet, some come a great deale short of others, and doe onely see superficially; whilst others of deeper judgement, and more conversant in Studies of this nature, will goe farre beyond them.

Crales humanorum membrorum live corporum, eisi multa sumant à materia seu à semine, tamen certum est, eas valde temperari potestate syderum, & ad eorundem posita variari & gubernari.

## Of the Eclipses this Year.

**T**here will be this year a small Eclipse of the Moon visible in our Horizon: It is on Sunday the 10. of January; it begins about 10 minutes past 8 a clock at night: the Sunne is almost in the first degree of Aquarius, and the Moon almost in the degree of Leo. The middle of this Eclipse is at 17 minutes past 9 and the end at 24 minutes past 10, so that the whole time from the beginning to the end, is 2 houres 14 minutes.

There be also two other Eclipses, and both of them of the Sun, but will not be seen in England.

The first of these is on the 22 day of June and may be seen in Spaine, the Southern part of France, and in many places of Africa.

The second is between the 15 and 16 day of December, and may be seen in Nova Guines, the Islands of Salomon, and in the Land of Magellanica neere adjoining. The first of these two is a great and totall Eclipse, in the 10 degree of Cancer. The second of these is also a great Eclipse, but not totall, in the fourth degree of Capricorn. The first continueth three houres: The second, three houres and 36 minutes, according to the Observations of the Trismoble Tycho.

Obfer

## Observations for Husbandmen.

**I**n Januarie take off superfluous branches from fruit-trees, and prepare your ground for Gardens, uncover Tree-roots, cut your Vines in some of the Twelve dayes.

Set Quick-sets, Holes, Gallers in the moneth of Februarie; And now cover up the Hoats of your Trees with good Earth, which you opened before in the beginning of Januarie.

In March you may graft; but in planting and grafting chuse a warme time: whereof let not the wind be in the East or North, because such winds are commonly nipping, especially being helped by any aspect of the Moone with Saturne or Venus in cold Signes, as Virgo, Capricorne, Taurus, Scorpio, Pisces, or Cancer.

In the end of April, or beginning of May, set and sow tender Herbes and Seeds in your Gardens, in a good temperature of Aire.

Remove young trees, either in the end of October, in November or Februarie, the Moone increasing, and be sure to set that side South, which was South before, because it cannot stand the cold North.

Sow Castell, the Moone in Aries, Sagittarius, or in Capricorne, being in her last quarter.

Gather all fruit that you meane to keepe, in a dry time, when the Moone is at the full.

Sow all such Seeds as have round roots (as Onions, Leekes, Turneps, &c.) either three or four dayes before the full, or three or four dayes after the full.

penny weight: by Avoir-du-pois 8 ounces: And the  
Cromwell-bakers penny weight (by Troy) 7 ounces, 13  
penny weight: by Avoir-du-pois 8 ounces & one quar-  
ter. If the Baker want one ounce in 36 ounces of  
this assize, he shall suffer the Gallows, without any  
sort of admonition, 51 Hen. 3.

Astrologickall Elections, &c. briefly described for  
administration of Physick and Phlebotomy.

**A** in all other parts of Physick, so in Phlebotomy, or letting of blood, it is skillfully and circum-  
spectly to be considered and certainly knowne the  
cause: In wherher it be needfull and good to the Pa-  
tient, as that it be to purge the body of some unnatu-  
rall, haughty, and superfluous humour. For other-  
wise, letting of blood is very dangerous, and openeth  
the way to many grievous infirmities. And note ge-  
nerally, that it is not convenient, either for a lean  
and weak man, or for a very fat and grosse man to be  
let blood, neither for a child under 14 yeares of age,  
nor an old man above 56.

Now there remaineth to be considered, how it can-  
derth with the patient inwardly, for his complexion  
and age; and outwardly, for the time of the yeare,  
time of the day, and byer.

For the	Phlegmatick	} The	Artes or Sagittarius
